Note:

- Decrease both spindle speed and feed rate proportionally when the milling parameters exceed the machine's maximum spindle speed.
- Recommend oil mist to avoid tool damage.

Label Sample

Diameter and Corner R accuracy measurements are printed on the label to support High Precision milling.

The shank taper angle shown is not an exact value and to avoid contact with the work piece, we recommend the user controls the precise value of this angle. Shank taper angle should not make contact with the work piece.

Features

Various lineup from $\phi 0.1$ to $\phi 3$

CBN-LRF2000/4000 Common features

Feature 1

High rigidity cutting edge

Super negative rake angle from the cutting edge at the tip point to peripheral cutting edge.
Less damage when milling hard materials.

Feature 2

Sharp cutting edge

The cutting edge is outstandingly sharp even with the super negative rake angle.

Note:

- Decrease both spindle speed and feed rate proportionally when the milling parameters exceed the machine's maximum spindle speed.
- Recommend oil mist to avoid tool damage.
