Label Sample

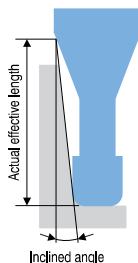

#001 ϕ D1.999 R+0.001/0.000

Diameter and Corner R accuracy measurements are printed on the label to support High Precision milling.

The shank taper angle shown is not an exact value and to avoid contact with the work piece, we recommend the user controls the precise value of this angle. Shank taper angle should not make contact with the work piece.

Features

4-flute shape withstands high efficiency milling.
Milling time can be significantly reduced compared to 2-flute.

CBN-LRF2000/4000 Common features

Feature 1

High rigidity cutting edge

Super negative rake angle from the cutting edge at the tip point to peripheral cutting edge.
Less damage when milling hard materials.

Feature 2

Sharp cutting edge

The cutting edge is outstandingly sharp even with the super negative rake angle.

Milling results	Mill under higher efficiency conditions than 2-flute. Greatly shortens milling time.	Large damage under the same milling conditions as 4-flute.	When the feed per tooth is the same, the damage is small, but the milling time is about twice as long.

- Technical Data

Achieves high-speed milling that exceeds conventional CBN end mills even for small diameters.
 $\phi 0.3$ can be used in a machining center equipped with a 30,000 min⁻¹ spindle. It is recommended to decrease both spindle speed and feed rate proportionally.

Note:

- Decrease both spindle speed and feed rate proportionally when the milling parameters exceed the machine's maximum spindle speed.
- Recommend oil mist to avoid tool damage.
